

## Optimum storage conditions for parts made of polyamide (PA)

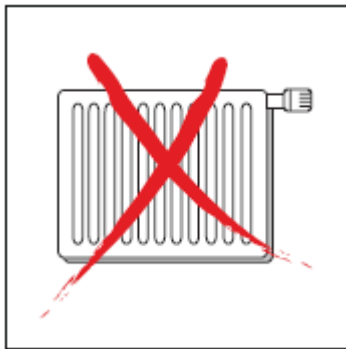

HellermannTyton cable ties, fastenings and fixings are manufactured from high-quality polyamide (PA). This industrial synthetic material is mainly processed using injection moulding, but can also be extruded.

Polyamide is a hygroscopic material. This means that the material absorbs and loses moisture. For optimum handling for parts made of polyamide it is important that the material is in a condition of equilibrium with a water content of approximately 2.5%.

1. Do not expose the product to direct sunlight!

2. Store the product away from direct sources of heat.

3. The ideal storage conditions are those of the central European standard climate:
